Mobile malware reverse engineering

Course
program

| Nº | Track | What you will learn | What you will practice | Lesson | Practice | Evaluation |
|----|--|--|---|--|--------------------------------|--|
| 0 | Introduction | <ul style="list-style-type: none"> About your trainer Course roadmap Course structure | — | Intro | — | — |
| | | | | Introduction to virtual lab | — | — |
| 1 | Mobile malware essentials | <ul style="list-style-type: none"> Android security models: DAC/MAC, SafetyNet, “unknown sources” The Android package structure manifest with entry points, Dalvik bytecode and native code Static analysis tools Dynamic analysis tools | — | Mobile malware essentials: Android | — | Knowledge check: mobile malware essentials |
| | | | | Mobile malware essentials: iOS | — | — |
| 2 | DuKong: sophisticated Android espionage campaign | <ul style="list-style-type: none"> Surface entropy, signature, strings and unpacking Manifest research, suspicious permissions, broadcast receivers and services Decompilation procedure | <ul style="list-style-type: none"> Static analysis of Dalvik bytecode Analyzing native libraries Understanding staging concept: payload decryption | DuKong: the story | — | — |
| | | | | Introduction to DuKong | Lab: introduction to DuKong | Quiz |
| | | | | Solution: Introduction to DuKong. Stager functionality | — | — |
| | | | | DuKong: payload decryption | Lab: DuKong payload decryption | Checkpoint quiz |
| | | | | Solution: decryption. DuKong payload analysis | — | — |
| | | | | DuKong: wrap-up | — | — |

| Nº | Track | What you will learn | What you will practice | Lesson | Practice | Evaluation |
|----|----------------|---|--|---|--|-----------------|
| 3 | LightSpy | Structure of the most popular packer for Android Dynamic file analysis | <ul style="list-style-type: none"> • Qihoo packer JIANGU basic concept and footprints location • Unpacking using dynamic instrumentation with Frida framework • Logging web requests using dynamic instrumentation featuring Frida framework | LightSpy: the story | Lab: LightSpy. Surface analysis | Checkpoint quiz |
| | | | | Solution: surface analysis. LightSpy unpacking | Lab: LightSpy. Payload analysis | Quiz |
| | | | | LightSpy: wrap-up | — | — |
| 4 | MagicKarakurt | Java native interface connection Ghidra JNI correct code decompilation | <ul style="list-style-type: none"> • Advanced static analyzing of Android native shared libraries using Ghidra • Static decrypting of configuration files using Python • Frida framework to dump configuration file • Dynamic instrumentation for configuration file dumping using Frida framework | MagicKarakurt: the story. Surface analysis | Lab: MagicKarakurt. Surface analysis | Quiz |
| | | | | Solution: surface analysis. Dive into native | — | — |
| | | | | Dynamic config dumping | Lab: MagicKarakurt. Dynamic config dumping | Checkpoint quiz |
| | | | | Back to Java | — | — |
| | | | | MagicKarakurt: wrap-up | — | — |
| 5 | LightSpy iOS | How to deal with iOS malware Objective-C selector calls | <ul style="list-style-type: none"> • Advanced static analysis of Mach-o binaries • Dealing with msgSend selector calls using Ghidra plugins: restoring cross references • Static config file decryption using Cyberchef or any other suitable tool | LightSpy iOS: the story | Lab: LightSpy iOS. Surface analysis | Checkpoint quiz |
| | | | | <ul style="list-style-type: none"> • Solution: surface analysis • Code analysis | — | — |
| | | | | LightSpy iOS: wrap-up | — | — |
| 6 | Course Summary | Summary | Trainer 's closing remarks | — | — | — |
